Development Project 2 : Design, Planning and Management

Task 7.3: Sprint Retrospective

Team members:

- Thien Minh Phan – 100864086
- Ngoc Khanh Nguyen – 4957059
- Khanh Dinh – 101339475

Team's velocity – Ideal

- The team velocity was slower than the ideal one, there were many reasons behind this. We under-estimate the effort required to complete the tasks and some problems with decision making during choosing the right tool for the project and during the developing phase of the project.
- We have to research more and put more effort into the project to get the job done at least on time or before the due date of the project.

Team's process

- At the first demonstration to the stakeholder, the website did not work correctly as there were some problems with the programming and the project UI wasn't working too. However, we did manage to configure everything and completed all the tasks as the project is working perfectly now.

Suggestions :

- We have to put more effort into the project, have better distribution of work between team members to achieve improvement for the next sprint.
